

Managed Firewall

Simpler. Safer. Scalable.

In the age of cloud and Zero Trust, the firewall has taken on a new role. Still critical, but far more complex to manage. It is no longer just a gateway, but part of a wider security ecosystem that protects users, applications, and data wherever they reside.

Challenges in a connected world

Organisations struggle with a constant flow of new threats, fragmented tools, and hybrid infrastructures that create blind spots. IT teams rarely have the time or expertise to keep pace, resulting in delayed updates, misconfigurations, and compliance pressure. The outcome is higher costs, weaker protection, and less room for innovation.

Our solution: firewall redefined for Zero Trust

Conscia Managed Firewall is designed for the new role of the firewall in a Zero Trust world. Delivered through cloud-native management and intelligent automation, the service ensures consistent policies across users and environments, complete visibility into traffic, and proactive optimisation. Always updated, always compliant, and always aligned with best practice. The solution freeing your IT team to focus on what matters most.

Built to support your Zero Trust journey, Managed Firewall provides a secure foundation that can expand with advanced access and protection capabilities as your needs evolve.

How Managed Firewall works

Delivered as a managed service, Conscia takes responsibility for implementation, migration, and ongoing management of your firewalls. Hardware or virtual firewalls are deployed in your environment, while monitoring, updates, and optimisation run from our secure cloud platform. The service scales seamlessly with the number and size of firewalls, with all recommended security features included by default. Policies and reporting are handled centrally, giving you a predictable and efficient service model.

About Conscia

We design, build, secure and run the digital infrastructure that secures progress for European organisations. From cloud to connectivity, and visibility to security, we bring the expertise to keep our customer's systems running and their business moving.

Benefits

-  Expert management
-  Cloud-native simplicity
-  Unified security
-  Free your IT
-  Peace of mind

Why Conscia?

At Conscia, we design our services to be in the technological forefront. Built by cloud, for cloud, to maximise scalability and efficiency. That means no costly legacy management stacks, no unnecessary infrastructure overhead. Instead, we focus on making the complex simple, delivering secure and resilient firewall management that grows with your business. With ISO 27001-certified operations and a Zero Trust mindset, we build an infrastructure that is both resistant to today's threats and ready for tomorrow's access needs.
