

Cybersecurity Maturity Assessments

delivering an actionable 360° view of your security posture

As your digital footprint increases, so does your attack surface. Understanding how and where your organization is most vulnerable enables you to strengthen your business security posture, improve your readiness and minimize risk. With cyber threats varying per company and industry vertical, there's no one size fits all. Conscia's Maturity Assessment is a full-service package that provides tailored insights and actionable recommendations.

How it works

No matter which Industry Standard (e.g., CIS, NIST, NIS2) applies to your business, Conscia's Maturity Assessment helps you improve cyber-resiliency and evolve your cybersecurity strategy. Based on your chosen standard, our certified experts work with your subject matter experts across the organization to identify blind spots by looking at processes, people, and technology. The output is everything you need to act with confidence: a detailed overview of current capabilities and an understanding of how to address the gaps in the form of a cybersecurity roadmap, complete with prioritized recommendations to improve your maturity.

Your team can focus on what matters most, and you're best placed to secure the proper budget for your security investments. The Executive Dashboard presents a high-level summary of the critical findings helping CISOs easily communicate with the Board. All the details are available in drill down, enabling you to tailor relevant communication for all stakeholders across the business.

The Maturity Assessment offers a structured approach for cybersecurity to become a business enabler against evolving cyber threats. Whether you want the Maturity Assessment to be a baseline, part of your regular ongoing security program, or even used to assess your supply chain partners and suppliers, Conscia puts you in control.

Don't wait for a breach to get started. Act now. Reach out at [conscia.com/contact](https://www.conscia.com/contact) for more information.
